Introduction

The following document will explain how to set up the basic SDK's required to develop for your Pico and Hi5 V2 devices. It is recommended to use the Unity 2019.x/2020.x/2021.x LTS version to create a new project. Currently, only Pico Neo3 and Pico4 are supported, and Pico Neo2 is not supported. The Unity 2022 version is being adapted.

Pico SDK Setup

Pico SDK Download

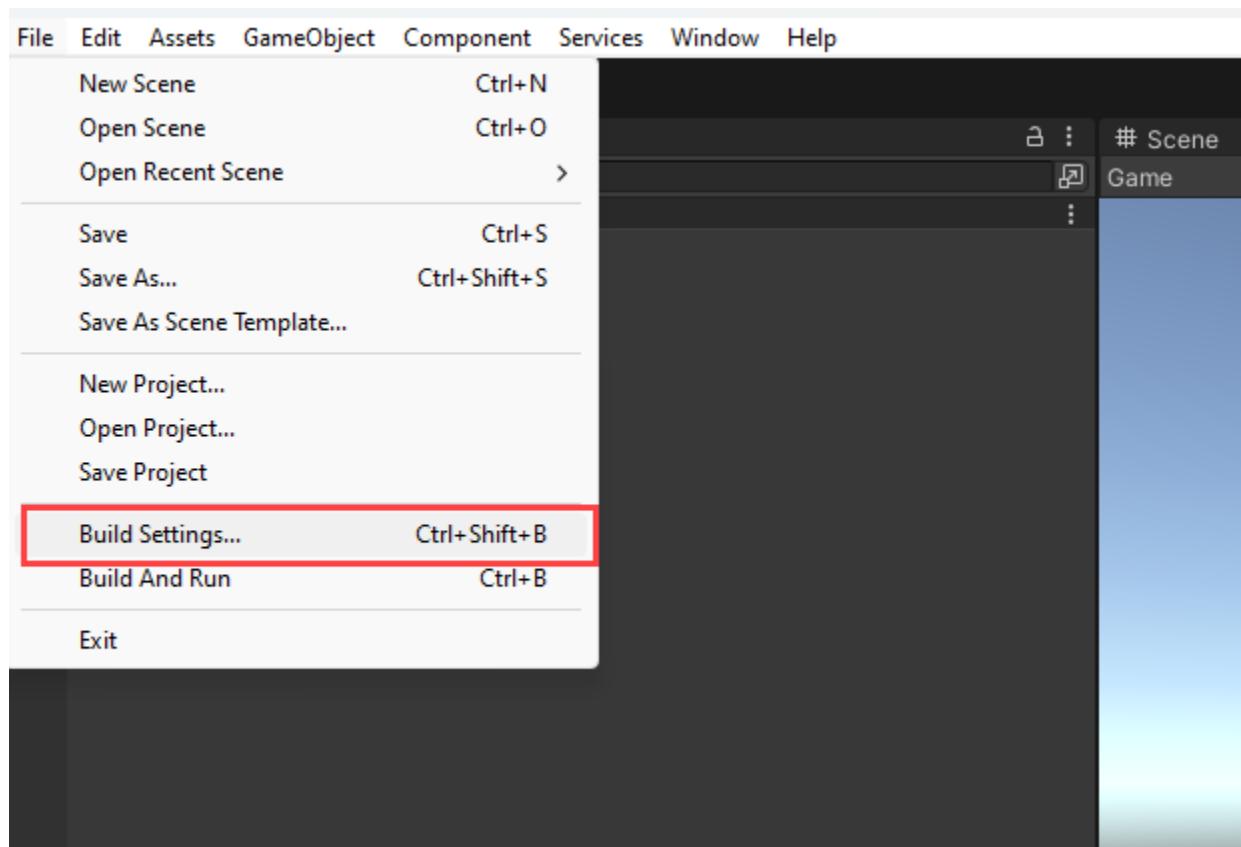

Go to the Pico official developer website to download the latest version of Unity XR SDK pico vr unity rapid development document

<https://developer-global.pico-interactive.com/sdk>

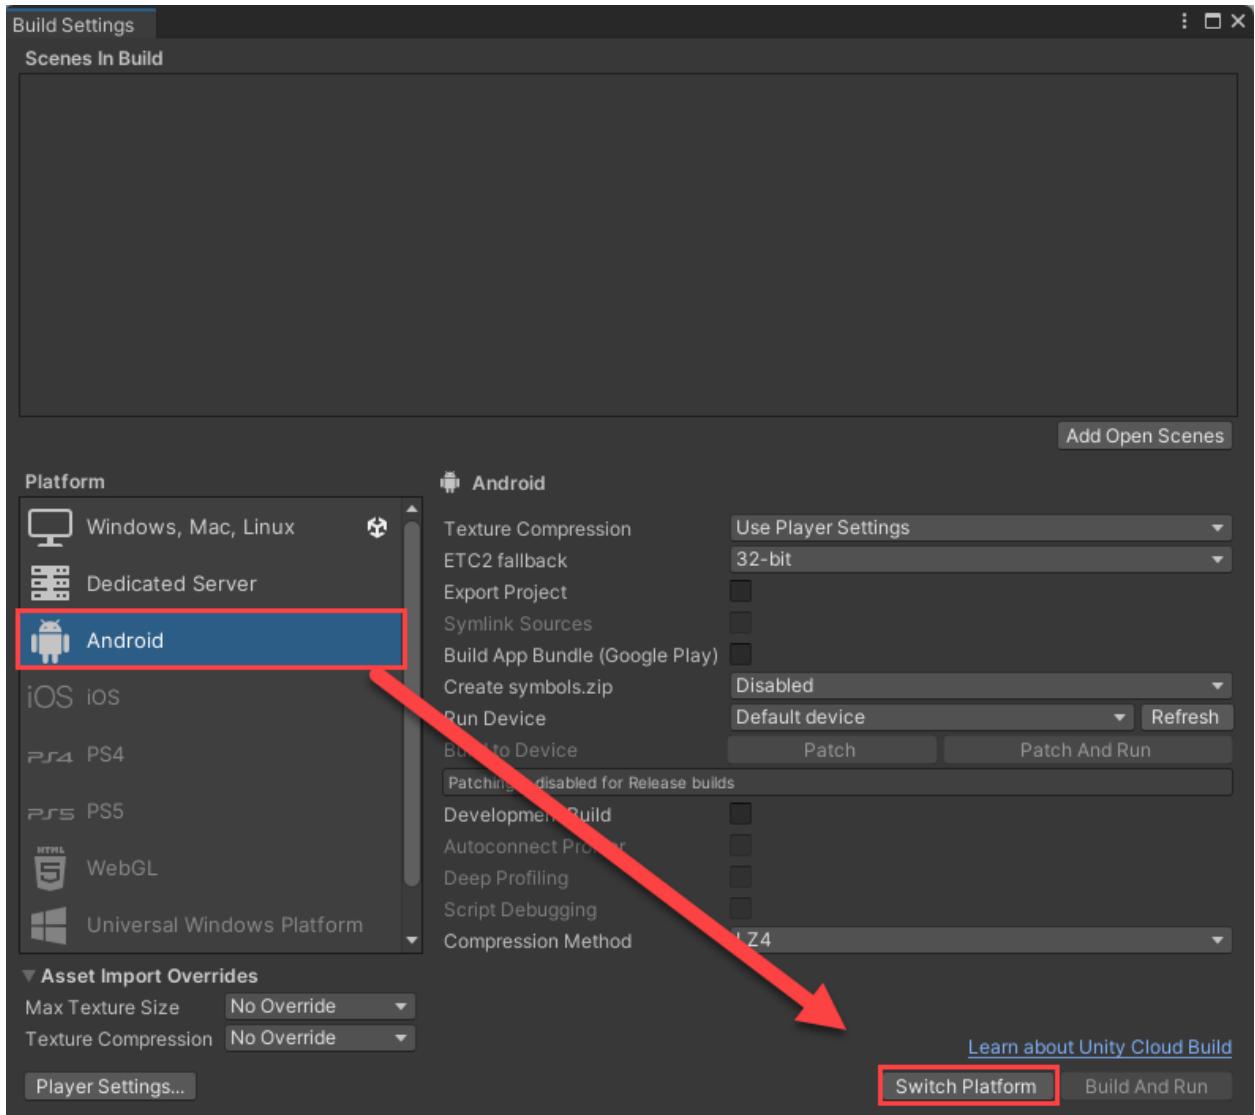

Pico SDK Installation

Unzip the SDK file PICO Unity Integration SDK-220.zip

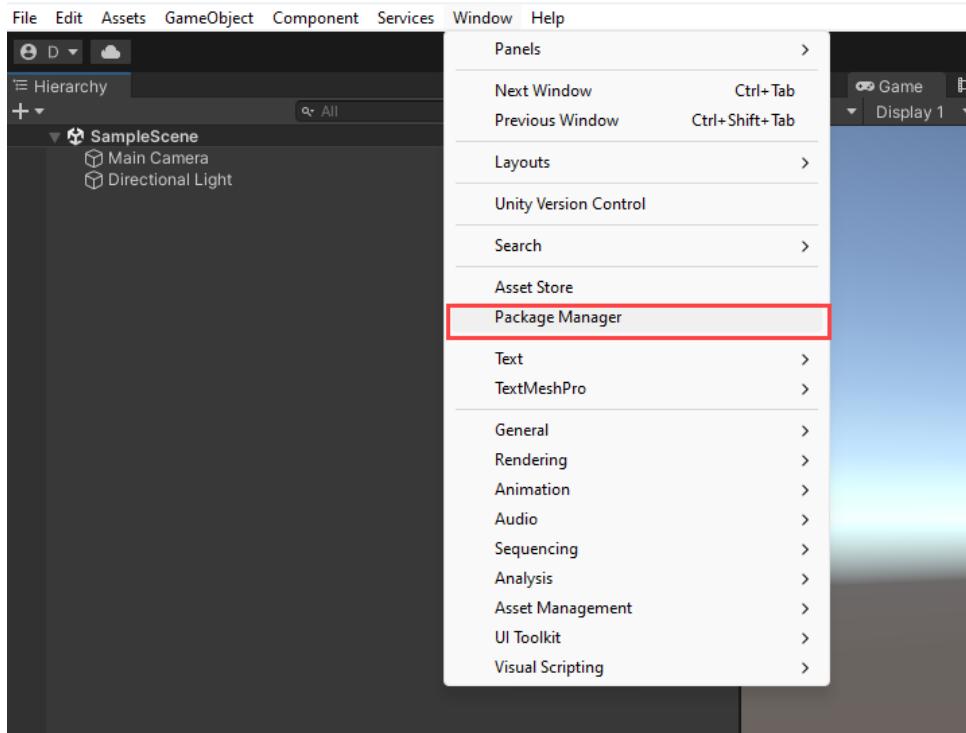

Create or open a Unity project, switch to the Android platform, click File -> Build Settings

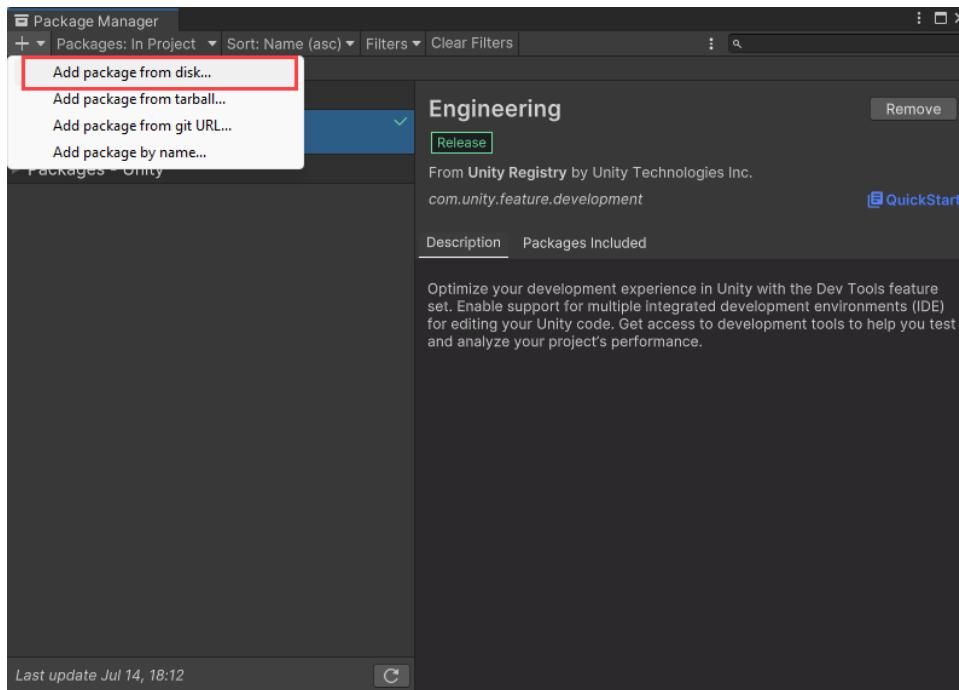

Select the Android platform in the Build Settings window, and then click the Switch Platform button

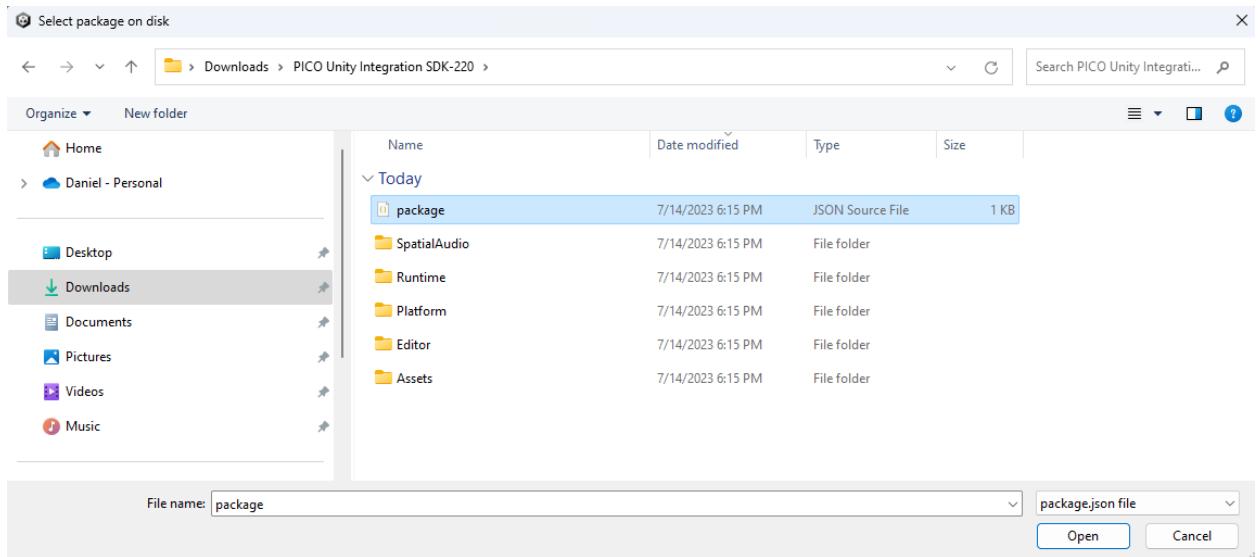

Click Windows -> Package Manager to open the Package Manager window and import Pico Unity XR SDK, as shown in the figure:

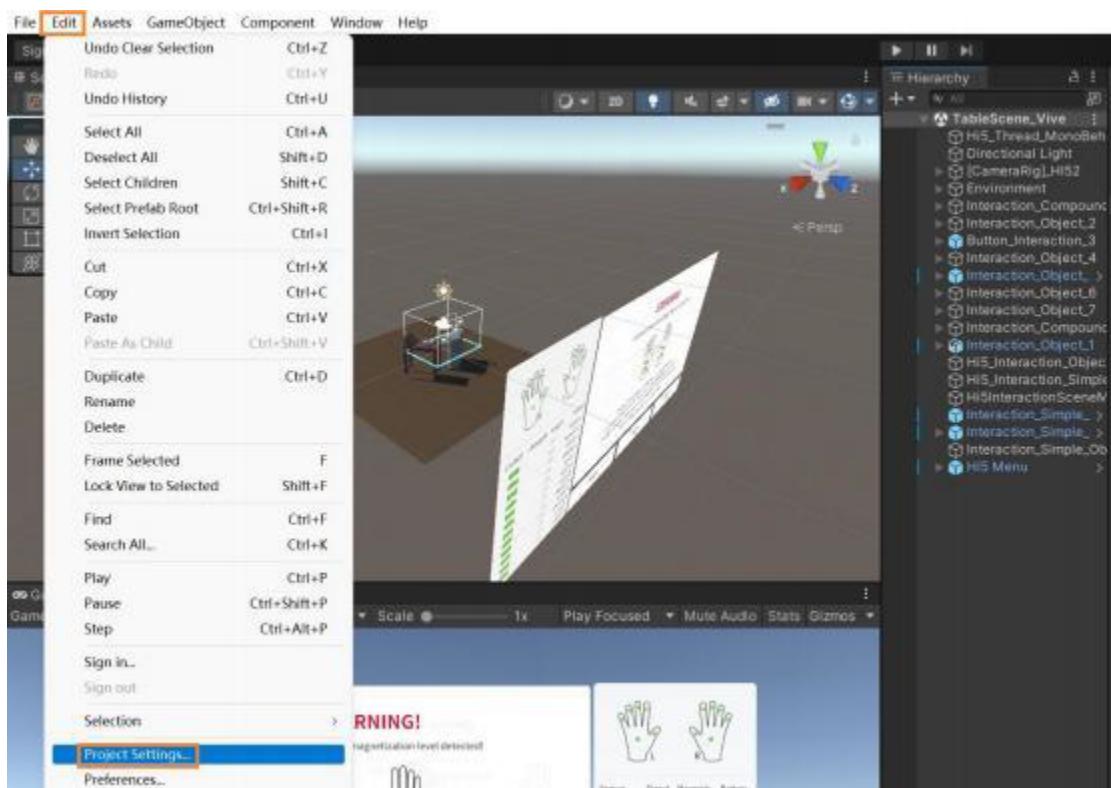

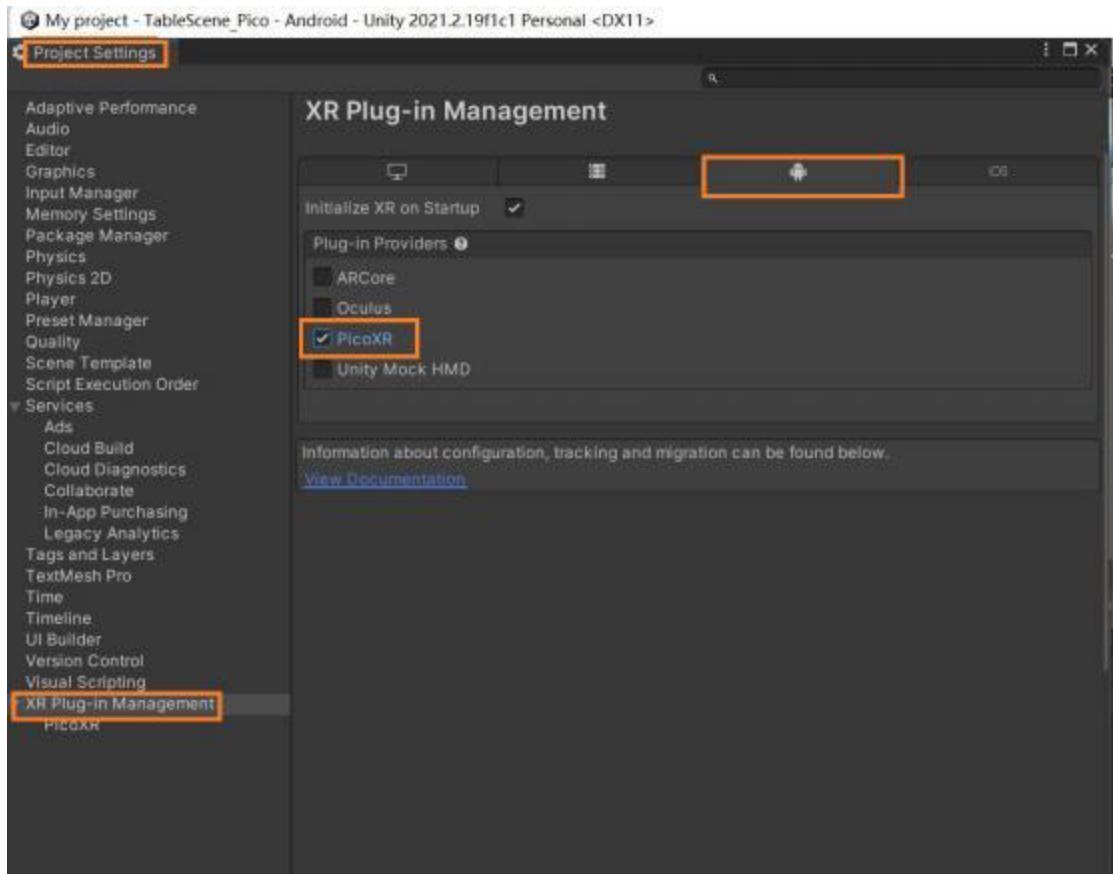

Package Manager -> Add package from disk ... , import the package.json file, as shown in the figure:

After the import is successful, click Edit -> Project Settings, and apply the PicoXR plug-in, as shown in the figure:

Inspector Project Settings **Player** Lighting Navigation Services

Acquire swapchain image rate as possible

Recycle command buffers*

Apply display rotation during rendering

Identification

Override Default Package Name

Package Name `com.DefaultCompany.Hi5`

Version* `0.1`

Bundle Version Code `1`

Minimum API Level `Android 9.0 'Pie' (API level 28)`

Target API Level `Android 10.0 (API level 29)`

Configuration

Scripting Backend `Mono`

Api Compatibility Level* `.NET Standard 2.1`

C++ Compiler Configuration `Release`

Use incremental GC

Assembly Version Validation

Mute Other Audio Sources*

Target Architectures

ARMv7

ARM64

x86 (Chrome OS)

x86-64 (Chrome OS)

Split APKS by target architecture (Experimental)

Target Devices `All Devices`

Install Location `Prefer External`

Internet Access `Auto`

Write Permission `Internal`

Filter Touches When Obscured

Sustained Performance Mode

Low Accuracy Location

Chrome OS Input Emulation

Android TV Compatibility

Warn about App Bundle size

App Bundle size threshold `150`

Active Input Handling* `Input Manager (Old)`

Script Compilation

Scripting Define Symbols

List is Empty

+ - Copy Defines Revert Apply

Additional Compiler Arguments

List is Empty

+ - Revert Apply

Suppress Common Warnings

Allow 'unsafe' Code

Use Deterministic Compilation

This screenshot shows the Unity Project Settings window for the 'Player' tab. The left sidebar lists various settings categories. The 'Player' category is selected and highlighted with a red box. Within the Player settings, several options are highlighted with red boxes: 'Api Compatibility Level' set to '.NET Standard 2.1', 'Target Architectures' including 'ARMv7', and the 'Scripting Backend' dropdown set to 'Mono'. The 'Player' tab also contains sections for Identification (package name, version), Configuration (scripting backend, api compatibility level, compiler configuration), and Target Architectures (target devices, install location, internet access, write permission). Other settings visible include lighting, navigation, and services.

Hi5 V2 Fundamental SDK Installation

After the Unity VR environment is configured, import the Hi5-2 SDK:

Hi5 V2 SDK Download

Download the Hi5 2.0_Pico3&Pico4_FSDK_Unity_v1.1.0.23.zip file from the [hi5vrglove.com downloads](https://hi5vrglove.com/downloads) page

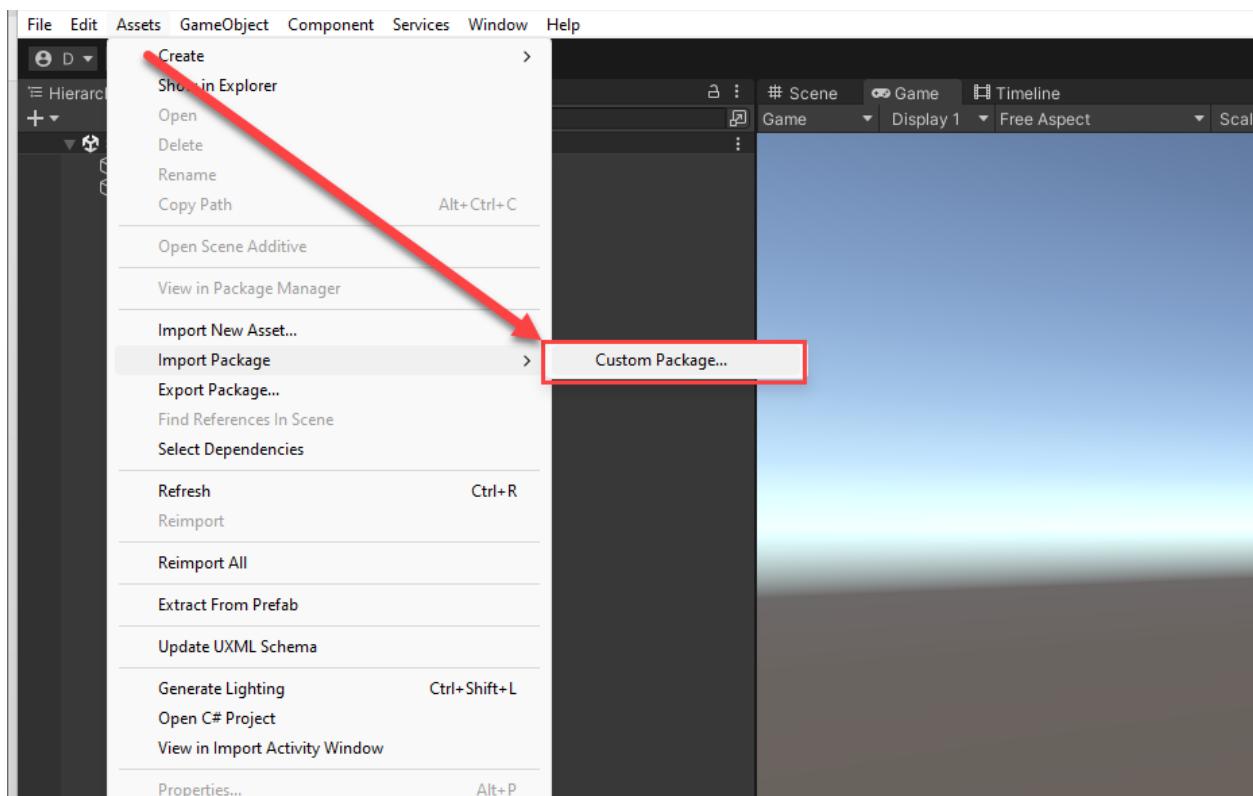

<https://hi5vrglove.com/downloads>

Unzip the file

	Date Modified	Type	Size
Hi5 2.0_Pico3&Pico4_FSDK_Unity_v1.1.0.23	7/17/2023 3:17 PM	Unity package file	35,808 KB
Hi5 2.0_Pico3&Pico4_FSDKdemo_Unity_v1.1.0.23.apk	7/17/2023 3:17 PM	APK File	57,248 KB

Hi5 V2 SDK Installation

Go to Import Package and select Custom Package

Locate the Hi5 V2 packages file in the file explorer and select and import all, as shown in the following image:
